

AX-PPR3-280-400

280/400kW Three Phase Power Regulators

Product overview

The AX-PPR3-xxx Power Regulators are designed to provide continuously adjustable control of electric heating loads from a BMS Controller or similar. Applications include electric heating coils, heating cables and electric furnaces. The AX-PPR3-280/400 use Solid-state switching with “zero crossing technology” to reduce RFI problems and provide accurate switching control. LED Indication of Output ON and are designed for panel mounting. The units feature three cooling fans which turns on automatically when the built in thermostat exceeds 60°C. No additional heatsinks or fans are needed.

Features

- 0-10Vdc Control input
- 200 & 400kW Models
- Fused to meet your load requirement
- Built in Thermostat to switch on integral fans
- Three Integral Fans (400 has one large fan)
- Controls all three phases
- LED Indication

Product specifications

Input:		0-10Vdc
Fan Supply:		230Vac 50/60Hz
Max. Heater Duty:		
	PPR3-280	280kW
	PPR3-400	400kW
Dissipated Heat:		Depends on load
Rated Supply:		415Vac / 50/60Hz
Power Consumption:		110mA @ 24Vdc (2.7VA) or 185mA @ 24Vac (4.5VA)
Fuses:		3 x fuses dependant on load
LED Indication:		ON when output is on
Terminals:	Control	M8 Stud connections
	Power	M8 Stud connections
Ambient Temperature Range:		0 to 45°C
Dimensions:		See drawings
Country of Origin:		United Kingdom

Installation & configuration

The AX-PPR3 Large Power Regulators are designed for mounting on a vertical panel. It is important that free air movement around the unit is not restricted. Allow sufficient air space between adjacent units to allow optimum performance of the heatsink. Installation must be carried out by a suitably trained electrician, and in accordance with the relevant statutory regulations. These units MUST be earthed using the M6 stud provided and the Load Terminals must be tightened to the torque specified in the Specification Table.

Load Supply and Back-up Protection:

The AX-PPR3 Large Power Controllers feature internal quick acting semiconductor fuses to protect the switching devices. The Load Cables must be protected by external appropriate fuses or MCB's in the usual manner. Load cables must be sized such that they are rated in excess of the fuse ratings. If in doubt, contact Axio for advice.

Ratings:	Output	Current	Fuse	
AX-PPR3-280	108kW	150A	180A MT	FM4 Semiconductor Type
	117kW	163A	200A MT	FM4 Semiconductor Type
	153kW	213A	250A MT	FM4 Semiconductor Type
	165kW	229A	280A MT	FM4 Semiconductor Type
	192kW	267A	315A MT	FM4 Semiconductor Type
	228kW	317A	355A MT	FM4 Semiconductor Type
	236kW	328A	400A MMT	FM4 Semiconductor Type
AX-PPR3-400	324kW	450A	500A MMT	FM4 Semiconductor Type
	378kW	525A	630A MMT	FM4 Semiconductor Type

Semiconductor Fuse Replacement:

Disconnect from the main supply before attempting to remove the cover. Remove the main cover earth strap and then the four cover retaining screws. The main cover earth strap must be fitted before re-applying the power.

Cables:

Screened cable should be used for connections to BMS Controllers, where possible the cable screen should be connected to a functional earth (not mains safety earth); normally the screen should be earthed at one end only to avoid earth loops.

Cycle Time:

The Cycle Time is preset. An 0-10Vdc Input Signal of 5V equates to the load being at 50% ON and likewise with an input of 2.5V load will be 25% ON. A 10V input will equal 100% i.e. full ON.

Operation

The AX-PPR3-xxx is designed to control electric heating loads in linear proportion to the incoming 0-10Vdc control signal. Control is by solid-state semiconductor devices which control the load using pulse width modulation (PWM)N techniques. These devices feature "zero crossing point" switching of the AC load which virtually eliminates RFI problems.

CAUTION!

In normal operation the heatsink surface can exceed 90°C. Dangerous voltages exist inside the unit and particular care should be taken. The AX-PPR3-xxx Power Controllers must be installed in accordance with the relevant statutory regulations and installation must be carried out by an experienced and fully qualified engineer.

Ventilation

The AX-PPR3-xxx are designed to operate in a maximum ambient temperature of 45°C. Which should not be exceeded. If necessary, enclosures or control panels should be ventilated with a cooling fan.

Over Temperature Monitoring

A thermostat is fitted to the unit to protect against over temperature. When the temperature of the unit reaches 60°C the three fans placed above the Thyristors are automatically switched on.

AX-PPR3-280-400

280/400kW Three Phase Power Regulators

For units up to a current load of 132 Amps at 45°C

For units up to a current load of 190 Amps at 45°C

For units up to a current load of 280 Amps at 45°C
